Brandon Garza

Senior Software Engineer
Robstown, TX | wk.brandongarza0623@gmail.com | (484) 291-8858
https://www.linkedin.com/in/brandon-garza-b1517b393/

SUMMARY

Seasoned Software Engineer with 9+ years of experience designing and delivering enterprise-grade applications across healthcare, finance, and SaaS domains. Skilled in building scalable backend systems with **Golang** and **Node.js**, developing dynamic frontends with **React/Next.js** and **TypeScript**, and architecting cloud-native solutions on **GCP**. Proven track record of modernizing legacy platforms, implementing modern data pipelines with **Python, Pandas,** and **Apache Spark**, streamlining complex processes, and delivering secure, high-performance solutions that drive measurable business impact.

EDUCATION

UNIVERSITY OF TEXAS AT AUSTIN — **Austin, TX**
Bachelor's Degree in Computer Science — **2012-2016**

TECHNICAL SKILLS

- **Programming Languages:** Go (Golang), Node.js, Python, TypeScript, JavaScript, SQL
- **Frontend Development:** React, Next.js, Redux, Context API, TypeScript, JavaScript, Material UI, Tailwind CSS, Cypress, Jest
- **Backend Development:** Golang (Gin, Echo, gRPC, Gorilla Mux, net/http), Node.js (Express, NestJS), Python (Django, FastAPI, Flask, Celery), RESTful APIs, gRPC, WebSockets, Django REST Framework
- **Data Engineering & Analytics:** Pandas, PySpark, Apache Spark, NumPy, matplotlib, ETL Pipelines, BigQuery, Dataflow
- **Databases:** PostgreSQL, MongoDB, SQLAlchemy, GORM, indexing & query optimization
- **Cloud & Infrastructure:** Google Cloud Platform (Cloud Functions, Cloud Run, Pub/Sub, Cloud Storage, BigQuery), Docker, Kubernetes, Azure DevOps, GitHub Actions, Google Cloud Build
- **System Design & Architecture:** Microservices, Event-driven architecture, Multi-tenant systems, Serverless applications, Payment and EHR integrations, Authentication & Authorization (OAuth 2.0, JWT)
- **Testing & Quality Assurance:** Pytest, Go testing frameworks (Testify, GoMock), Cypress, Jest, Automated Testing Frameworks, CI/CD Pipelines
- **Healthcare Systems:** FHIR APIs, HL7 v2.x, Epic, Cerner, Meditech, HIPAA-compliant systems, GAMP4 compliance

PROFESSIONAL EXPERIENCE

SCIENCESOFT
Senior Software Engineer — **Feb 2023-Present**

- Developed end-to-end telehealth workflow modules using **Golang** backend APIs (**Gin**, **Echo**, **gRPC**) and **React**/**Next.js** frontend, creating seamless user experiences for care coordinators and behavioral health specialists that made complex workflows feel effortless
- Built responsive web applications with **React**, **Next.js**, and **TypeScript** that worked flawlessly across desktop and mobile devices, ensuring healthcare providers could access the platform anywhere
- Designed and implemented **RESTful APIs** and **gRPC services** in **Go** with **JWT** and **OAuth 2.0** based authentication, providing the backbone that kept all system components communicating securely
- Developed real-time communication features for virtual consultations using **WebSockets** and **WebRTC** with **Go** backend signaling servers, enabling crystal-clear video calls between specialists and medical centers
- Built robust database solutions with **PostgreSQL** and **MongoDB** using **GORM** and **Go MongoDB drivers**, designing schemas that handled everything from patient records to consultation logs while keeping performance optimized
- Created automated workflow solutions with **Go microservices** and **serverless functions** (**Cloud Functions**, **Cloud Run**) on **GCP**, reducing manual coordination time by up to 40%
- Implemented comprehensive **EHR integrations** with major systems (**Epic**, **Cerner**, **Meditech**) using **FHIR APIs**, **HL7 v2.x** standards, and custom connectors, ensuring interoperability across healthcare systems
- Developed **HIPAA-compliant data pipelines** on **Google Cloud** (**Cloud Storage**, **BigQuery**, **Dataflow**), securing patient data while ensuring accessibility for authorized care teams
- Engineered modern **data pipelines** with **Node.js** for real-time healthcare analytics, enabling processing of large consultation datasets, building **ETL workflows**, and generating actionable insights at scale
- Implemented **event-driven architectures** using **Google Pub/Sub** and **RabbitMQ**, ensuring reliable communication between microservices and smooth system scaling
- Developed **automated testing suites** using **Go testing frameworks** (**Testify**, **GoMock**) and **Cypress** for **React** frontends, ensuring reliability across rapid development cycles
- Implemented **CI/CD pipelines** with **Google Cloud Build** and **GitHub Actions**, automating deployments and maintaining a smooth release cycle

JAFTON
Senior Software Engineer — **Jun 2021- May 2023**

- Developed multi-vendor marketplace platform for a major Central Asian bank with 100+ branches using **React** frontend with **TypeScript** and **JavaScript**, and **Python** backend APIs (**Django REST Framework**, **FastAPI**), creating seamless e-commerce experiences across 14+ product categories that made online shopping feel effortless
- Built responsive web frontend applications using **React** and **TypeScript**, implementing dynamic user interfaces that evolved with each iteration to enhance customer experience and drive marketplace adoption
- Architected backend microservices using **Python** (**Django**, **FastAPI**) and **Celery** for asynchronous task processing, breaking down monolithic legacy systems into scalable, independent services that could be updated without disrupting the entire marketplace operation
- Implemented payment system modernization by refactoring legacy payment modules using **Python** with **SQLAlchemy** and **Django ORM**, creating robust financial transaction processing that met banking security standards
- Integrated shipping carrier APIs using **Python HTTP clients** (**Requests**, **HTTPX**) and third-party SDKs, connecting the marketplace with multiple delivery providers to offer customers flexible shipping options and real-time tracking capabilities

- Migrated from monolithic applications to containerized **Python microservices** using **Docker** and **Kubernetes**, enabling rapid deployment and scaling of individual marketplace components
- Built database integration layers using **SQLAlchemy** and **PostgreSQL**, ensuring efficient data management across product catalogs, user accounts, order processing, and inventory management systems
- Created **RESTful API** services using **Django REST Framework** and **FastAPI** that powered both web and mobile applications, providing consistent data access patterns and enabling seamless synchronization across all platform touchpoints
- Implemented real-time product comparison features using **React** frontend with **WebSockets** and **Django Channels** integration from **Python** backend, allowing customers to evaluate products from different vendors side-by-side with dynamic pricing and availability updates
- Built scalable containerized deployments using **Docker** containers with **Python microservices** deployed on **Kubernetes**, enabling rapid scaling during high-traffic periods and efficient resource utilization across the bank's infrastructure
- Optimized application performance through **asyncio**, **Python async/await**, **SQLAlchemy query optimization**, **React lazy loading**, and **PostgreSQL indexing strategies**, ensuring fast load times even with large product catalogs and high user volumes
- Implemented agile development practices working in international teams with **GitHub Actions** and **Azure DevOps CI/CD pipelines** for **Python applications**, enabling rapid feature delivery and seamless collaboration across different time zones
- Built automated testing frameworks using **Pytest** for Python backend microservices and **Jest/Cypress** for React applications, ensuring code quality and reliability across rapid development cycles in the agile environment
- Configured dependency injection and middleware in **Python** applications (**FastAPI Depends**, **Django middleware**) for logging, error handling, and security, creating maintainable and testable code architecture across all microservices

RAPID DEPLOY
Software Developer **Jun 2019 - Jun 2021**

- Developed GAMP4-compliant pharmaceutical manufacturing platform using **Golang** backend **(net/http, Gorilla Web Toolkit, WebSockets)** and React frontend to automate cancer and TPN drug production for a multinational pharmaceutical company with $15+ billion revenue, building the digital backbone for life-saving medication manufacturing
- Developed robust backend services using **Golang (net/http, gRPC, Gorilla Mux)** with **MongoDB**, ensuring reliable data flow between hospital ordering systems and manufacturing facilities
- Created intelligent production planning algorithms in **Go**, automatically calculating multi-dose treatment courses (6+ weeks), scheduling preparation dates, and optimizing delivery timelines for oncology patients
- Developed comprehensive reporting system using **Go** with server-side data processing and **Chart.js** on the frontend, generating KPI dashboards, trend analysis, and operational reports that helped management make data-driven decisions
- Built client-server architecture with **Go WebSockets** and **Citrix server integrations**, enabling hospitals to seamlessly request medications from the nearest manufacturing facility through dedicated client applications
- Implemented scalable database architecture using **MongoDB** (mgo driver) and **PostgreSQL (pq driver)** with optimized queries for handling high-volume order processing across 100+ countries and multiple manufacturing facilities
- Built comprehensive audit trails and compliance reporting meeting ISO-9001 and GAMP4 standards, providing complete traceability for regulatory inspections and quality assurance processes

PHRONETIK
Full Stack Developer **Aug 2016 – Apr 2019**

- Modernized SaaS platform for a digital marketing agency specializing in phytotherapy advertising, transforming a legacy codebase using **Golang (net/http, Gorilla Mux)** and **Python (Flask)** to support multi-tenant architecture serving global phytotherapeutic companies
- Performed extensive code refactoring using Go idioms (interfaces, goroutines, channels) and Python best practices (PEP8, OOP principles) to improve code readability, eliminate technical debt, and establish consistent coding standards across the advertising automation platform
- Developed scalable backend services with **Golang (net/http, gRPC, Gorilla Toolkit)** and **PostgreSQL (pq driver)**, exposing RESTful APIs to power digital ad campaign automation and media advertisement serving capabilities
- Implemented robust data isolation strategies in **PostgreSQL** using schemas, roles, and custom authentication middleware in Go, ensuring tenant data security and privacy while enabling shared infrastructure across organizations
- Designed and maintained data pipelines using **Python, Pandas, and Apache Spark (2.0 ecosystem)** for ad performance reporting, campaign analytics, and customer segmentation — enabling near real-time insights for marketing teams
- Built reporting and analytics modules with **Pandas, NumPy,** and **matplotlib**, streamlining multi-tenant reporting and replacing legacy Excel-based workflows with automated, code-driven reporting
