SUMMARY

Results-driven Full Stack Engineer with 12+ years of experience building scalable, high-performance applications across fintech, healthcare, and enterprise domains using **Python, Django, Flask, React, AWS**, and **PostgreSQL/MySQL**. I specialize in architecting end-to-end solutions from AI-powered fraud detection systems and ML-driven diagnostics to compliance frameworks processing large-scale datasets (50M+ transactions) while maintaining sub-200ms response times. My approach combines solid engineering fundamentals with modern data processing (**Pandas, NumPy, SQL optimization**) and DevOps practices (**Docker, CI/CD**, microservices) to deliver software that's not just functional, but maintainable and ready to scale when the business needs it.

EDUCATION

CALIFORNIA STATE UNIVERSITY, FRESNO

Bachelor's Degree in Computer Science

2008-2012

***Relevant Coursework:** Data Structures and Algorithms, Software Engineering, Database Systems and Management, Computer Networks, Web Development

PROFESSIONAL EXPERIENCE

CURRENT

Senior Software Engineer

SEP 2021-Present

- Developed responsive web banking portal using **React, Redux Toolkit, Material-UI**, and **React Query** for optimized data fetching
- Architected scalable microservices infrastructure using **Django**, supporting multi-tier transaction workflows with **Python** for type safety and business logic
- Built event-driven architecture using **Celery, RabbitMQ, AWS SQS**, and **AWS SNS** for asynchronous payment processing, notification workflows, and batch reconciliation jobs
- Implemented robust data persistence layer using **SQLAlchemy** and **Django ORM** with **PostgreSQL, AWS RDS, DynamoDB**, and **MySQL** for transactional data and reporting databases
- Engineered **SQL queries** and **stored procedures** for processing large-scale financial datasets (50M+ transactions), optimizing query performance with indexing strategies and partitioning schemes
- Built **AI-powered fraud detection** tools integrating **scikit-learn** and **TensorFlow** models for real-time transaction risk scoring and anomaly detection
- Developed **ETL pipelines** using **Pandas** and **NumPy** for data extraction, transformation, and loading workflows processing millions of customer records from **S3**, transforming raw data into actionable insights for risk analytics stored in **DynamoDB** and **PostgreSQL**
- Built **serverless** data processing workflows using **AWS Lambda** functions triggered by **S3** events and **SQS** messages for automated document processing and compliance reporting
- Optimized performance with **Redis** caching and **DynamoDB** for session management and high-throughput key-value storage, reducing database load by 70%
- Deployed containerized microservices on **AWS ECS** with auto-scaling policies and **AWS Lambda** functions for **serverless** processing of asynchronous tasks
- Configured **AWS CloudWatch** for monitoring, logging, and alerting across **Lambda** functions, **ECS** tasks, and **API Gateway** endpoints with custom metrics and dashboards
- Implemented **CI/CD pipelines** using **GitHub Actions** and **Jenkins** with automated testing, security scanning, and blue-green deployments to **AWS**
- Utilized **AWS S3** for storing transaction logs, compliance documents, and data lake architecture supporting **ETL pipeline** workflows
- Built notification system using **AWS SES** for email communications and **SNS** for multi-channel alerts (SMS, email, push notifications) to customers and compliance officers

SCIENCESOFT

Software Engineer

MAY 2018 - AUG 2021

- Developed **Python**-based ML inference pipeline integrating **TensorFlow** models for real-time frame analysis with low-latency processing
- Built **Next.js/React 16** web application with **WebSocket** streaming for real-time examination visualization and physician annotation interface using **JavaScript (ES6)**, **HTML5**, **CSS3**, and **Material-UI** for responsive clinical UI
- Implemented **Python/FastAPI** backend with **Pydantic** for high-performance API services handling medical imaging data and real-time diagnostic workflows
- Architected **REST API** endpoints with **JSON/XML** data interchange for DICOM-compliant image storage and retrieval system using **Django REST Framework**
- Engineered **PostgreSQL** database schema with **SQLAlchemy ORM** for relational medical records and **MongoDB** with **PyMongo** for high-volume frame metadata storage with HIPAA-compliant encryption at rest and in transit
- Integrated **Chart.js** and **D3.js** for interactive data visualization dashboards displaying examination metrics, abnormality distributions, and diagnostic analytics
- Implemented **CI/CD** pipelines with **Git** version control for automated testing and deployment of medical device software updates using **pytest** and **unittest**
- Built **AJAX**-powered asynchronous data loading for seamless physician workflow during frame review and annotation sessions
- Leveraged **NumPy** and **Pandas** for medical imaging data preprocessing and statistical analysis of diagnostic results across patient cohorts

PELTON INTERACTIVE

Full Stack Engineer

SEP 2015 – APR 2018

- Architected and integrated AML Logix risk scoring engine with **Python/Flask** microservices implementing real-time user risk assessment for KYC/AML compliance
- Engineered **PostgreSQL** and **MySQL** database schemas with **SQLAlchemy** and **Django ORM** for storing risk profiles, transaction histories, and compliance audit trails
- Optimized complex **SQL** queries with CTEs, window functions, and indexing strategies for analyzing millions of transaction records and identifying suspicious patterns
- Enhanced Seon fraud detection integration, implementing async event-driven architecture with **Celery** and **Redis** pub/sub for real-time risk analysis and caching layer
- Built **WebSocket** real-time connections using **Flask-SocketIO** for live fraud alert notifications to compliance officers
- Developed responsive compliance dashboard using **jQuery**, **Knockout.js**, **HTML5**, **CSS3**, and **Bootstrap** for risk monitoring and case management
- Designed **JSON**-based **REST APIs** using **Flask-RESTful** and **Django REST Framework** for third-party AML vendor integrations and internal compliance systems
- Established comprehensive testing suite using **pytest**, **unittest**, and **Selenium WebDriver** for automated compliance workflow validation
- Managed source control and deployment workflows using **Git/TFS** for multi-jurisdictional regulatory compliance tracking
- Built data aggregation pipelines using **Pandas** for generating regulatory reports from large-scale transaction datasets across multiple jurisdictions

VERIZON

Jr Software Engineer

MAY 2012 – AUG 2015

- Designed and implemented scalable backend services using **Python/Flask** and **Django**, reducing code complexity and accelerating feature development by 30%
- Developed real-time vehicle tracking features using **Flask-SocketIO** and **WebSockets**, enabling instant location updates and alerts for fleet managers
- Built modular, maintainable **RESTful APIs** using **Django REST Framework** and **Flask-RESTful** for telemetry ingestion, reporting, and integration with GPS hardware using **JSON** data interchange
- Optimized **PostgreSQL/MySQL** queries with **SQLAlchemy** and indexing strategies, improving system responsiveness for large datasets of vehicle telemetry by 40%
- Enhanced web dashboards using **jQuery 1.7**, **HTML5**, and **CSS3**, ensuring cross-browser compatibility and responsive design for desktop and tablet users

- Implemented **AJAX**-powered asynchronous data loading for seamless fleet monitoring and live telemetry visualization
- Established comprehensive testing suite using **pytest**, **unittest**, and **Selenium WebDriver** for automated functional and integration testing
- Managed version control and deployment workflows using **Git**/TFS for continuous integration and delivery
- Developed data processing pipelines using **Pandas** and **NumPy** for high-volume GPS telemetry streams, ensuring reliable ingestion and storage of vehicle location data
- Built **SQL** stored procedures and complex queries for aggregating fleet analytics and generating performance reports from millions of GPS data points

SKILLS

Frontend Development: React, Next.js, Redux Toolkit, React Query, JavaScript (ES6+), jQuery, Knockout.js, HTML5, CSS3, Material-UI, Bootstrap, AJAX

Backend Development: Python, Django, Flask, FastAPI, Django REST Framework, Flask-RESTful, Pydantic, WebSockets, Flask-SocketIO

Databases & ORMs: PostgreSQL, MySQL, MongoDB, SQLAlchemy, Django ORM, PyMongo, Redis, SQL (queries, stored procedures, CTEs, window functions)

Machine Learning & Data Processing: TensorFlow, scikit-learn, Pandas, NumPy, ETL pipelines

Message Queues & Async Processing: Celery, RabbitMQ, Redis pub/sub

Data Visualization: Chart.js, D3.js

Authentication & Security: OAuth 2.0, JWT, Okta, RBAC, HTTPS, HIPAA compliance

Cloud & DevOps: AWS (ECS, Lambda, CloudWatch, CloudFormation), Docker, CI/CD, GitHub Actions, Jenkins, Git, TFS

Testing & Quality Assurance: pytest, unittest, Selenium WebDriver

Protocols & Data Formats: JSON, XML, REST API, DICOM

Compliance & Standards: HIPAA, KYC/AML, GDPR
